```

```
Test score: 0.41556513959964114
Test Accuracy : 0.8844000000317891
```
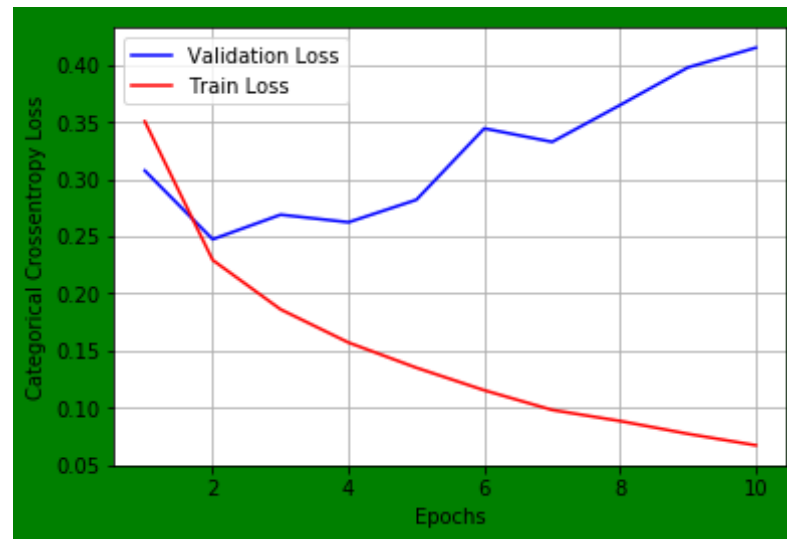

Obsrevation:

- Implemented 2RNN with 2LSTM layer observed overfitting at epochs = 10
- Train Loss Slopes downward where validation loss hits at inflection point .
- After inflection validation loss continue to increase.

RNN with 2 LSTM Layers without BatchNormalization and Dropout

```
In [0]:  from keras.layers.normalization  import BatchNormalization

#### Conclusions:
* Applied LSTM(Long Short Term Memory) on Amazon Fine Food Reviews Data
Set, Using Google Colab environment.
* Upload review text zip file into colab.
* preprocessing review text with score > 3 positive rating, score<3 neg
ative rating.
* Using pickle file to store preprocessed review text for future purpos
e.
* Converion of Reviews into IMDB format needs to create vocabulary, fre
quency for each word.
* sorted in descending order for each word with index ranking.
* Implemented 2RNN with 2LSTM layer observed overfitting at epochs = 10
* Train Loss Slopes downward where validation loss hits at inflection p
oint .
* After inflection validation loss continue to increase.
* Observed Same with 2RNN without BacthNorm and Dropout also.
* In the case of 3RNN 4 Lstm layered architecture slight improvement ob
served with increased no of LSTM layers.
* In the Train Loss And Validation Loss.
* For 4RNN 5LSTM layered Architecture changed dropout=0.35 observed mor
e curved layer of validation loss.
* With increase in no of layers, at epoch =10 train loss is stable.
* From above PrettyTable we can see the results for each layer.
```
